Innovation in ECG Management

Philips IntelliSpace ECG (iECG) system is an advanced electrocardiography management system that allows automatic processing, storage and distribution of ECG data tests from multiple sources and across different clinical areas of the hospital.

The system provides a complete set of software tools to analyze, view, edit and compare ECG records and also generate, manage and distribute reports in different formats to suit the specific needs of the institution.

iECG as an electrocardiography management system is based in the following components or main features:

- Integration with information systems and modalities (HL7, DICOM).
- Workflow management.
- Centralized storage.
- Viewer and post processing ECG tools.
